

#89333
Professional
11-Piece
Measuring &
Marking Set
Product
Note

⚠ WARNING: This product can expose you to chemicals, including Lead which is known to the State of California to cause cancer or birth defects or other reproductive harm. For more information, go to: www.p65warnings.ca.gov

The Automatic Center Punch included in this set requires downward force in order to activate the punching mechanism inside. The amount of force required to activate it can be reduced by loosening the brass cap at the back end of the tool. It is also best to find the point that you wish to impact by placing the tool tip onto your mark at a 70° angle to the mark and then bringing it to a vertical or horizontal 90° to the surface and then pressing the tool into the workpiece.

The Bore Gauge/Cylinder Gauge measures the diameter at the top of a hole by placing the tool into the hole and viewing the corresponding measurement. Reads in both Metric and Standard.

Other tooling should be self-explanatory or you could use an online search engine if further information is needed.
