INSTRUCTIONS FOR #60728 SCRIBER

Because your scriber is hand ground, there may be some variation in the width of cut from one end to the other. If there is a variation, we suggest you mark one end with a dot of paint so you’ll know which end is which.

Hold the scriber like a pencil and practice on the enclosed plastic until you become accustomed to the correct amount of pressure to use and the angle at which to hold the scriber. In most cases, only light pressure is required. For a deeper or wider line, try more pressure.

To scribe a straight line on flat surfaces, use a straight edge or ruler. To scribe a straight line on curved surfaces, use plastic label embossing tapes sold in hardware stores. Our plastic masking tape #60726 can also be used, but there is more chance of side pressure causing the tape to move.
