

# #84047 DUPLICATE-IT TIPS AND TRICKS FOR USE

*Note: This tool employs a razor blade. Do not let your fingers or any other parts of your body come in contact with the cutting edge of the blade; doing so may result in dreadful personal injury.*

To square-up a workpiece, remove the stop plate, then loosen the two knobs that hold down the clamp bar. Now slide the workpiece underneath the clamp bar. Position the

workpiece against the fence, then tighten the clamp bar screws. Guide the razor blade along the inside edge of the clamp bar to scribe or cut the material. Loosen the clamp bar screw and remove the piece. If you had not cut all the way through, flex the sheet to snap apart the cut.

Position the stop plate the desired distance from the inside edge of the clamp bar. To assure squareness, be sure the stop plate is in good contact with one fence or the other, then clamp the stop plate in place (you can

reposition the clamps as required to hold the stop plate securely). Load the workpiece into the tool as described above and make the cut.

Duplicate parts are made by leaving the stop plate in position when you load and unload more workpieces.
