Unsnap the narrow panel from the bottom of the filter cabinet and swing up the front panel. Then, unfold the booth bottom panel until it lies flat on the work surface.

Swing up the rear side panels. Insert the tabs into the slots in the top panel.

Swing up the front side panels and insert the tabs into the similar slots.

Place the turntable in the center of the booth bottom.

Plug the power supply into the socket next to the ON-OFF switch. Plug the power supply into a 110vAC wall socket.

Your spray booth is ready for use.

To make a double-wide booth, remove adjacent side panels and place two booths side-by-side.

To store the booth, reverse the steps above to reduce the size of the booth. Store the power supply in the side compartment.

Replacement filters and exhaust ducts are available from Micro-Mark. See our web site at www.micro-mark.com or call our Order Desk at 1-800-225-1066. For technical assistance, call our technical service line at 908-464-1094, weekdays, 1pm to 5pm ET
