

## #89670 Decal Application Station Instructions

### Before First Use

---

Before you can use the Micro-Mark Decal Application Station, you will first need to prepare the foam sponge provided with your Decal Station.

Remove the Decal Station from its packaging and remove the tweezers from the decal basin. You will see a square piece of blue foam underneath the tweezers in the sponge tray for the Decal Station...this is the foam sponge.

Take the sponge and submerge it in water for 2 to 3 hours. After allowing the sponge to rehydrate, place it back into the sponge tray. Gently press the sponge underneath the lip of the sponge tray, keeping the sponge in place for when you use the Decal Station.

Fill the basin below the sponge tray about 1/3 of the way with water. Now the Decal Application Station is ready for use.

### How to Use

---

Place your decal onto the sponge, then lower the sponge tray into the water in the decal basin. After the decal is completely submerged in water for about 5 seconds, raise the sponge tray out of the water.

Let the decal sit on the sponge for about 20 seconds to allow the backing paper to soak up more water to release the decal. After this you can gently slide the decal off the backing paper and onto the surface or model you plan to decal.
